

L'Alliance opens up to new horizons.

Chapter 5 of L'Alliance begins a new stage in residential development with the construction of buildings D and E, right next to the Parc Habité, just a few steps from the future SNCB stop and along the banks of the stream.

38 passive apartments will be built across these two buildings, with an architecture designed to harmoniously integrate with the existing landscape. Each building will offer a variety of layouts, from two-bedroom through-apartments to homes with large terraces, meeting the expectations of a diverse audience. The design continues the landscape vision of L'Alliance: with thoughtfully designed green surroundings, limited car traffic to preserve calm and quality of life, and access designed to balance functionality with discretion. Building E, with façades redesigned according to sustainability and elegance criteria, will include 23 apartments. Building D will offer 15 apartments, on a scale respectful of the natural terrain and local urban planning guidelines.

Once completed, these two new ensembles will strengthen both the residential diversity and the architectural harmony of L'Alliance, confirming its vocation as a sustainable and interconnected neighborhoods.
